SUMMARY

Senior Frontend Engineer with 7+ years building complex React/Next.js product UI for remote teams (13+ years total software experience).

- Reporting surfaces, form/admin workflows, and platform cleanup (CRA→Next migrations, shared UI foundations, CI/build improvements).
- At Labor Solutions, joined as Senior Frontend Developer, served as PIC on 6 OKRs, and stepped into light API/backend work only when it unblocked the UI.
- AI-native delivery for the last ~2 years (Cursor and similar); personal use of Copilot/Claude since preview days. All output reviewed, tested, and owned.

Seeking remote Senior Frontend roles where complex product UI and light API collaboration ship the product.

EXPERIENCE

Labor Solutions · Singapore (Remote)

Senior Frontend Developer · March 2024 – July 2026

Frontend-led delivery; PIC on 6 OKRs; reporting, forms/admin platforms, and Next migration/platform work; light Django/API when it blocked UI.

- **Primary frontend implementer for Engage reporting** (Summary, Categories, Miscellaneous) with Metabase embeds, risk indicators, geographic/category risk maps, and top/bottom sites – PIC on the multi-quarter OKR that progressed from 0.5 to 1.0 across 43 tracked tickets.
- **Identified and fixed dashboard vs Excel score drift** in questionnaire reporting by proving facility-first vs question-first aggregations diverged, then aligning exports to analytics queries as the single scoring authority.
- **Self-initiated platform improvements** for the Next.js app alongside legacy Create React App: Vercel-inspired style-guide foundation, Next.js 16 upgrade, barrel-file removal, and CI lint/format/build with caching – cut production build time from 84.5s to ~40.6s (2x).
- **Built a multilingual Indicator Bank across Django and Next.js** – reusable questions/answer sets, protected Excel import/export, partial-success validation, and idempotent survey association across four administration surfaces (Indicators, Questions, Answer Sets, Manage Associations).
- **Served as primary FE code reviewer** (and occasional BE reviewer); caught six merge-blocking defects in a customer-facing analytics migration PR – including score regressions and swapped question-type mappings – and expanded E2E coverage across questionnaire and admin surfaces.
- **Walked teammates through PRs, features, and architecture**; onboarded new joiners with technical and non-technical introductions.

Advance Auto Parts · Raleigh, NC, USA (Remote)

Frontend Engineer · June 2019 – January 2024

- **Model Deployment Framework** – built the self-service ML model hosting dashboard (Next.js, TypeScript, Tailwind) enabling data scientists to register, version, and deploy models without filing engineering tickets; eliminated a recurring manual process for the data science team.

- **Store Dashboard** – delivered store-level performance and sales-forecast views (Streamlit, Snowflake) comparing actual vs predicted net sales for regional leadership and store managers.

Earlier experience (2012 – 2019)

CrossOver – Software Engineer (remote, US) · Feb 2018 – Feb 2019

- ASP.NET / C# automation platform; CI/CD setup; unit tests (Jest, Mocha, Enzyme).

Infosys Ltd. – Software Engineer · May 2014 – Aug 2017

- WebMonitor – live website monitoring (ASP.NET MVC, D3, CasperJS); custom reporting, alerting, and health dashboards.

SP Web Solution – Web Developer · Feb 2013 – Mar 2014

- ASP.NET WebForms/MVC applications; feature delivery, testing, and debugging.

VIENNA Advantage – Junior Software Engineer · Jun 2012 – Nov 2012

- ERP/CRM modules (Silverlight, C#, Oracle).

SELECTED PROJECTS

PromptSurvey · qgenai.vercel.app – AI survey builder (prototype)

Next.js 15, React 19, Vercel AI SDK, Zod structured output, shadcn/ui, IndexedDB

- Prompt-to-survey UI with multi-type questions, per-question AI regeneration, and i18n.
- Provider-agnostic AI layer (Google GenAI, OpenRouter, LM Studio) with client-side persistence and structured validation.

SupplyChain+ · sc-plus.vercel.app – AI supply-chain compliance (prototype)

Next.js 16, React 19, PostgreSQL/pgvector, Drizzle ORM, Vercel AI SDK

- Portfolio demo of explainable supplier-risk scoring, complaint clustering exploration, and compliance/reporting workflows – not a production launch.
- Multi-provider LLM tools for summarization, sentiment analysis, and audit-oriented evidence export.

SKILLS

Frontend: React, TypeScript, Next.js (App Router), JavaScript, Redux Toolkit, Zustand, Material UI, Tailwind CSS, React Hook Form, Playwright, Storybook, Vitest, Responsive Design, Web Performance

Reporting & data UI: Metabase Embedding SDK, complex filters and drill-downs, chart/table performance, Excel export parity with dashboard views

Backend (supporting): Python, Django, Django REST Framework, PostgreSQL – REST APIs built to unblock frontend features

Data & analytics (collaboration): dbt, Trino – reporting pipeline integration for UI features

Mobile (adjacent): React Native, Expo – Learn module POC (Moodle, SCORM, quiz flows)

Platform & tools: GitHub Actions, Keycloak, Docker, Vercel, CI/CD, Figma (design-to-code)

AI native workflow: Cursor / Claude / Copilot – ~2 years AI-native delivery at work; tools used since early personal preview; all output reviewed, tested, and owned

EDUCATION

Lala Lajpat Rai Institute of Engineering and Technology · Moga, PB, India

B.Tech. Computer Science · 2011
